

**WATER MAIN REPLACEMENT  
 CONTECH IN PARTNERSHIP WITH THE TOWN OF KINDERSLEY  
 NOTICE TO LOCAL AREA RESIDENTS**

**First St. East, Fouth Ave. East Lane, Fifth Ave. East Lane & Sixth Ave. East Lane, Seventh Ave West Lane**

Beginning April 29<sup>th</sup>,2024, our water main replacement crews will begin the installation of a temporary water line and connecting residential services down Third, Fourth, Fifth Ave East and Sixth Ave West. The water main running down all four lanes will then be replaced with the house services reconnected to the new main. A new water main will also be installed down First St. East from Sixth Ave. (See Map on back for exact locations)

This project may take approximately twenty-two (22) weeks to complete.

Construction noise and temporary traffic delays can be expected during this time. Road closures will occur at watermain tie in locations along Second St. East between Third & Fifth Ave. East, as well as First St. East between Fourth & Sixth Ave. East. Forth & Fifth Ave. East Lanes will be closed while crews are working.

Please be aware of road cuts where you could experience uneven pavement.

Residential water will be supplied by a temporary overland water line during construction. Temporary overland water line will be run in front of properties. Ramps will be placed over walkways, please use caution when walking or driving over this water line. Our crews onsite will need access to connect your home or business to the temporary water service.

Residential water services from the curb stops to the watermain will be replaced. If any outdated lead services are encountered, the homeowner will be notified. Any additional water service replacement from the curb stops into the homeowner’s property, will only be evaluated upon homeowner request and all subsequent costs associated with the service line replacement will be the responsibility of the homeowner as directed by the Town of Kindersley.

Crews will be entering yards to inspect outdoor taps & hookups. Crews will require access to residential properties and buildings to shut down water supply to mains. Residents will be notified in advance of all scheduled water shutdowns, but temporary shutdowns may occur without warning.

Con-Tech General Contractors will endeavour to minimize any inconvenience however;  
 Residents & business owners are responsible for their own due diligence in relation to the water shut down.

During this time, a Precautionary Water Advisory will be issued, and tests will be conducted to ensure water safety. The advisory will provide instructions such as boiling water for drinking purposes for at least one minute at a rolling boil.

<p><b>BOIL WATER</b>  <i>Advisory in Effect</i></p> 	<p><b>While this work is being completed, surrounding soil or other contaminants could enter the system.</b></p> <p><b>Consuming unsafe water could affect your health, we advise you to boil your water first.</b></p>
---	---

Thank you for your patience and understanding during this upgrade.
